

BizPulse Operational Workflow Flowchart

Step-by-step logic, condition decision points, and database updates.

BizPulse Database Entity-Relationship (ER) Diagram

Complete entity registry including metadata tables (ImportBatch, Report, Insight, Prediction, GoogleTrends).

Database Schema ER Model Specifications

BizPulse utilizes a strict multi-tenant schema architecture. All product, invoice, transaction records, and alert calculations are scoped directly to each company segment to isolate client metrics.

Database Entity Registry Reference

Entity Model Name	Primary / Foreign Keys	Field Attributes & Descriptions
User	id (PK)	email (UK), username, first_name, last_name, avatar, auth_provider, social_uid
UserSettings	id (PK), user_id (FK)	safety_stock, csat_threshold, star_rating, email_alerts, auto_sync, sync_frequency, import_method
Business	id (PK), owner_id (FK)	name (Company name), industry segment, created_at timestamp, updated_at
Product	id (PK), business_id (FK)	name, sku (UK), category, price, cost, stock, created_at
SalesRecord	id (PK), business_id (FK), product_id (FK), import_batch_id (FK)	date, quantity, revenue, unit_price
InventorySnapshot	id (PK), business_id (FK), product_id (FK), import_batch_id (FK)	date, stock_level, reorder_status
CustomerReview	id (PK), business_id (FK), product_id (FK), import_batch_id (FK)	date, rating, review_text, sentiment score
CompetitorPrice	id (PK), business_id (FK), product_id (FK)	competitor_name, price, competitor_url, updated_at
GoogleTrendsData	id (PK), business_id (FK)	keyword, interest_score, date
ImportBatch	id (PK), business_id (FK)	status, rows_imported, created_at
Report	id (PK), business_id (FK)	name, type (PDF/CSV/Excel), created_at
Insight	id (PK), business_id (FK), import_batch_id (FK)	title, description, severity, insight_type
Prediction	id (PK), business_id (FK), product_id (FK), import_batch_id (FK)	target_date, predicted_sales, predicted_demand_level

■■■ MODEL CASCADE AND DANGER ZONE CONSTRAINTS

Purging or deleting 'Company Data' from the Settings dashboard executes CASCADE queries that permanently delete all transaction datasets. This action erases SalesRecords, snapshots, customer feedback, predictions, reports, and scraper price points but retains products and business registry details.
